

Patryk Szmekel

software engineer

About Me

Hello! I'm Patryk Szmekel. I am passionate about software engineering. I have professional experience in developing web applications in Python and GO technologies, as well as in designing and programming databases and creating ETL and data processing scripts. During product development, I had contact with both internal and external customers. For about a year I've been working on the development of a cloud platform based on Go and Kubernetes language, which was successfully implemented on a production environment during two of the biggest sport events broadcasted on television. In my free time I develop my own interests in the IT area through hobby projects and courses. I have a basic knowledge of web technologies HTML, CSS, JavaScript.

Age	26
